# List of Masts

Since 2000 in America, New Zealand, Australia and parts of Europe a 500 metre rule has been applied when planning permission is sought by a telecommunications company to sight a mast. Therefore in these areas of the world, no mast can be erected within 500 metres of sensitive areas such as schools, hospitals, domestic residences, old peoples homes, work places etc.

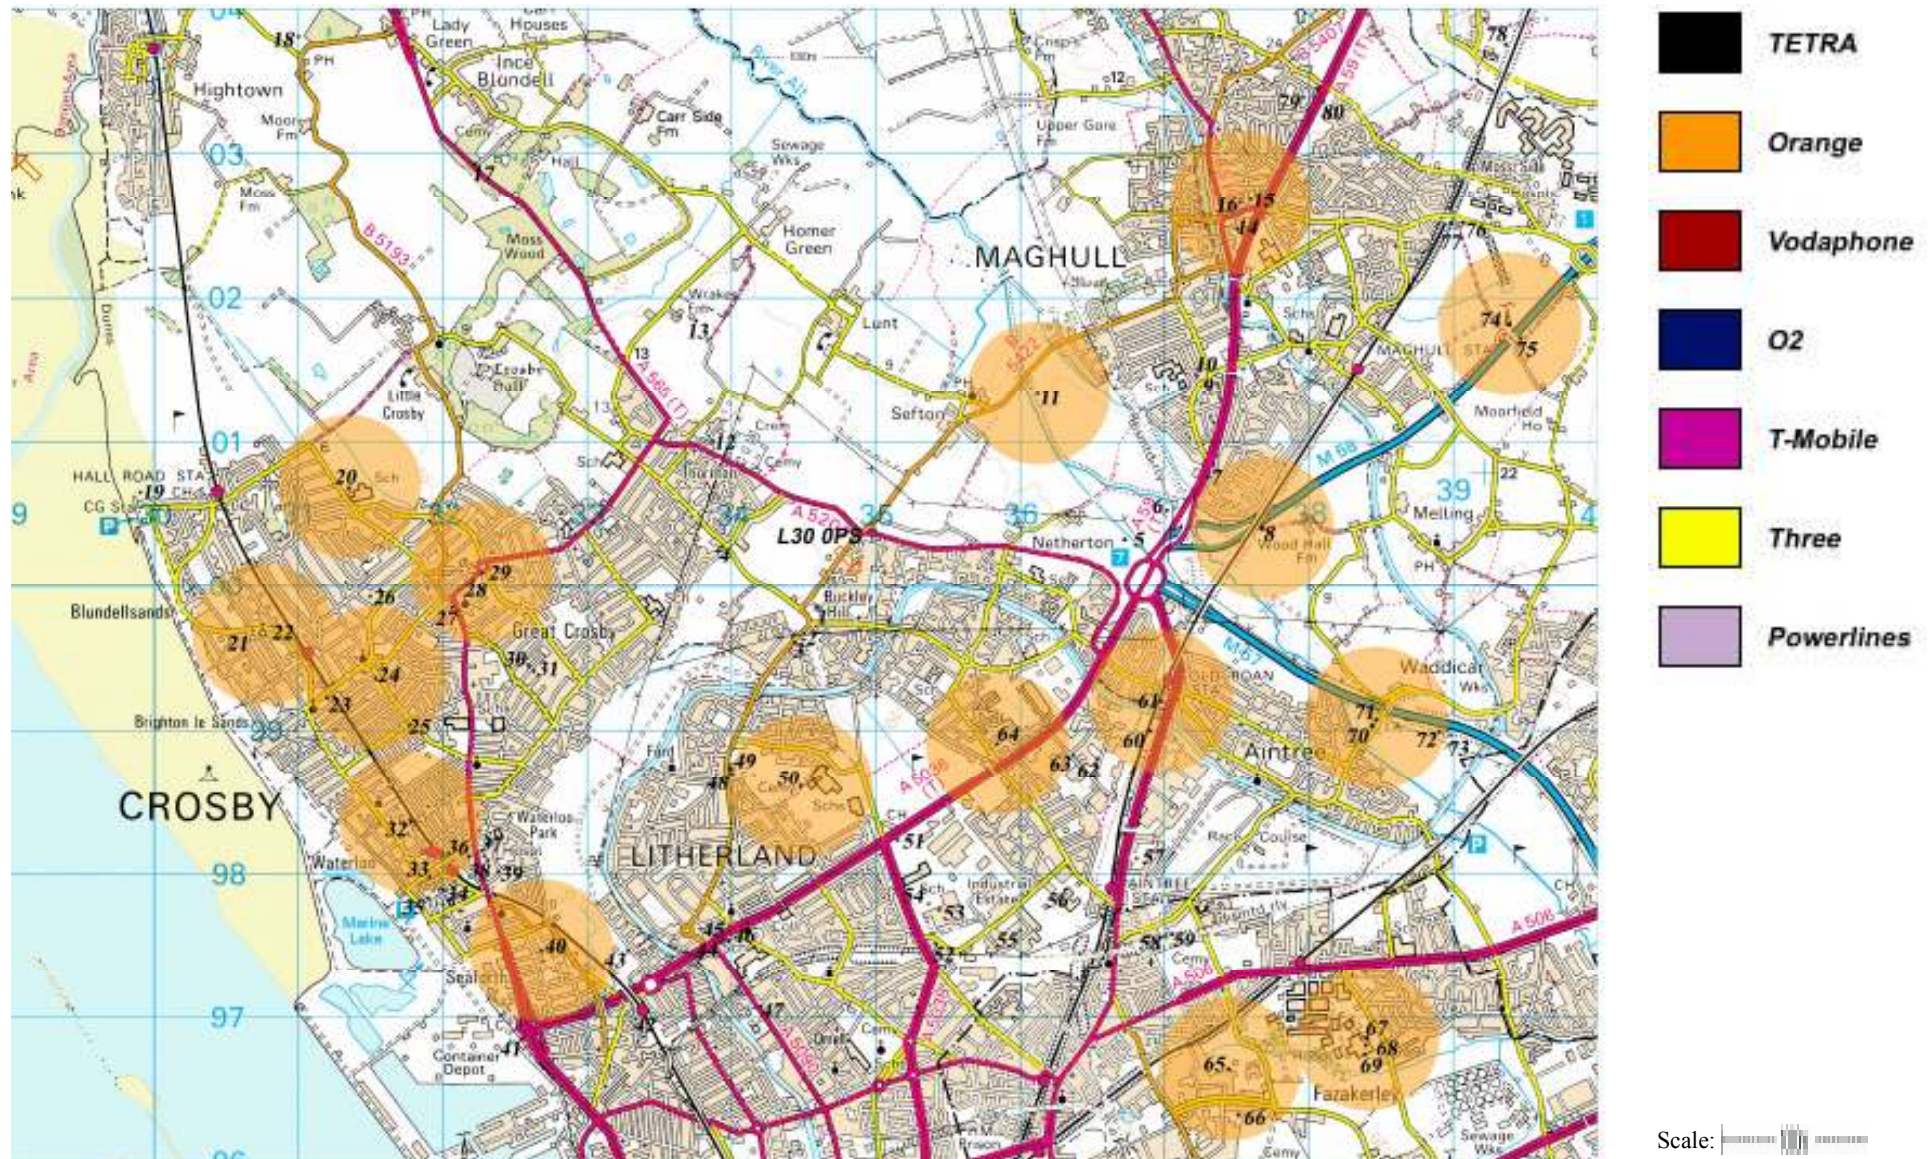

No such rule exists within the UK as of this writing. However we have used this 500 metre rule in constructing the maps contained in this document to show that masts are actively being sited close to Homes, Schools, Hospitals, Churches etc.
